

Presentation

IMMURE

Spring, 2023

Assignment

Make a 10 minute presentation where you present an analysis of the prologue and first chapter of the videogame *IMMURE*. Your presentation must include:

- Examples from the game, both text and stills or clips (you can find a playthrough [here](#))
- Slides for every group member
- Notes on *characterisation*, *setting*, and *game mechanics*

To get started, work with questions on the following pages.

The Mansion

The prologue of the videogame takes place in a dilapidated and strange mansion and should take around 15-20 minutes to play through. After playthrough, answer the following questions:

- What genre have the game developers been aiming for in Immure?
- How do the visual design and details of the game world underline the genre?
- What about the 2D camera and sound?
- What do we call this kind of opening in a “text”, and how/why does it make us identify with Will? Does the mood of the game benefit, too – or is it ruined?
- Make a short list of the challenges in the videogame as well as the accompanying game mechanics (what you can do with the main character): What are the primary challenges and mechanics, and how do they enhance the mood?

The Apartments

Part one of the videogame is set in an abandoned apartment building and should take you around 80-100 minutes to play through. As you play take notes on:

- Your movement around the apartment building
- Quests, challenges, and dangers that you encounter
- Interesting visual or symbolic details, including secrets about the other characters or the game world

We meet four characters in this part of the game:

- Anne Marie
- Thomas Davidson
- Brennen Alexander
- The Save Room Guy

For each character answer the following questions:

- What do they look like?
- What actions and motivations characterise them?
- What do we learn about their backgrounds through notes and dialogue?
- How do they create suspense, mystery, or horror?
- What roles do they play in the quest composition?

Remember to substantiate with examples.
